ENGINEERING INSTITUTION

Graphene!- What do we do with it now?

Prof Karl Coleman
University of Durham

Graphene is not just an exciting prospect for electronics. Karl Coleman will describe the properties of graphene and what graphene can do for engineering. Karl has researched and taught at the universities of Leicester, Strasburg, Oxford and now Durham. He started his own business on Teeside which develops ways of using graphene for such down to earth applications as paints and coatings, lubricants and composite materials. Karl will discuss the ways in which graphene can be combined with other materials to enhance performance.
